

Simple Cloud Solutions

Paper ticketing limits asphalt and cement producers and their ability to monitor, share, and verify load out information and adapt to changing DOT requirements. Simple Cloud Solutions (SCS) can help reduce the burden of adapting to new business landscapes while mitigating the challenges.

With a painless and seamless integration into your current workflow and devices, your data will be readily accessible and sharable through a website or mobile application. Open a new avenue of possibilities with Electronic Tickets, Shipment Life Cycle Monitoring, GPS Tracking, Business Insight, and/or Truck Camera Incident Capture. Contact SCS today to build a custom solution for your business needs.

Electronic Tickets

Send your tickets to the cloud either at the printing stage at load out computers or from current data stores.

Once your tickets are in the cloud, they can be easily accessed through a custom website or mobile application and shared as text or pdf to any number of parties including drivers, customers, and DOT.

Ticket Emailing can be automated at various times of the day to comply with changing DOT requirements.

Accessible tickets in the cloud open new avenues of possibilities for business development and shipment tracking.

Shipment Life Cycle Monitoring

With the mobile application, you and your customers will have more transparency than ever before

Message drivers or recipients through the application for easy communication

Drivers simply logging into the mobile application or website allows us to GPS track shipments in real time!

Optimize plant down times, alert customers of nearby deliveries, monitor delivery times, and more

Recipient accounts allow for immediate receipt confirmation and recording delivery temperatures.

Electronic Tickets • GPS Tracking • Messaging • Proximity Alerts
Receipt Confirmation • Temperature Recording

Incident Capture

Protect your business with Truck-mounted Cameras!

- Connect up to 4 Cameras per Truck
- Automatically Upload Video to Online Portal
- Optional Backup Monitor and Real Time GPS Tracking
- Detect Critical Events: Impact, Speeding, and Sudden Stops
- 720P recording on all CH 1-3, D1 on CH 4
- 128GB SD storage; up to 150 hours on 4 camera setup
- Camera options: wide angle, weatherproof, infrared, dome, sideview, rugged, reverse, etc.
- Dual Record mode (Continuous + Event)
- Optional Audio Recording
- Connects directly to vehicle ignition power, automated operation.
- Tamper-Resistant locking case available; Key access to SD card
- GPS provides location, vehicle speed, and accurate time/date.
- Adjustable Resolution & Frame Rate
- Built-in G-Shock Sensor and Gyro (adjustable sensitivity)
- Three 12V alarm input triggers for advanced event recording.
- Two 5V alarm outputs for 3rd party systems integration.
- Wired remote control & Emergency button for driver activation
- Auto SD card format feature. CP4 automatically detects SD corruption and auto-formats and begins recording again.
- Delay Shutdown feature to record up to 24 hours after ignition off.
- Improved performance in high-temp environments.

Due to the hardware and installation requirements, Incident Capture is not included in the 6 Month Free Trial.
